

CRANE PAYMENT INNOVATIONS

The smart choice for coin management

mei | cashflow®
series 7000

It's field proven.

The CF7000 5-tube changer has been the reliable choice in over 1.5 million operator installations since its release. The industry's first true coin manager goes beyond just accepting and dispensing coins. It helps operators make smarter decisions for managing their business. Unique tracking, analyzing, and diagnostic capabilities give operators the tools and business information they need to better manage their cash flow and increase profits. CF7000 provides a low cost of ownership to operators because it is a low maintenance device that's built to last and perform.

Smart coin management means:

- Managing coin inventory
- Optimizing payout
- Maximizing sales
- Minimizing costs

For an easy-to-operate coin manager...
it's the MEI CF7000.

Tube configurations vary by country:

US – 5c, 10c, 25c, \$1
 Canada – 5c, 10c, 25c, \$1, \$2
 Brazil – 5C, 10c, 1R, 50c, 25c
 Mexico – 50c, 1P, 2P, 5P, 10P
 Inquire for additional country configurations

How does the CF7000 help operations run smarter?

Manages Coin Inventory

The pin-point accuracy of the CF7000 is a product of sophisticated acoustic modules working and listening inside the device. This sonar technology is able to measure the value of each of its 5 tubes with an accuracy of +/- 1 coin, per tube. The information is conveniently displayed in real time on a 3-line LCD screen. Even if a driver loads tubes manually, the CF7000 will automatically track and account for the new total.

Knows Exactly What to Store

The CF7000 can easily manage the amount of coin inventory you keep on hand in the machine, so you don't have cash tied up unnecessarily. The CASHFLOW Series 7000 takes the guess work out of coin management. Max filling a coin mech to manage change payout is yesterday's strategy. Instead, choose from 3 different par levels, also known as float, to manage your coin inventory level, easily set by the touch of a button.

- **Par to Level** - Same coin denominations are set to fill to the level as determined by the operator. For example, if there are 2 tubes of the same denomination, the par level is the same for both.
- **Par to Value** - Coins are set to fill all tubes to a certain currency value, determined by the operator. The device determines the amount stored per denomination.
- **Par to Auto** - Coins are set to fill to an amount determined by the device based on the machines actual throughput. If sales patterns change, the changer automatically changes the Par amount and coin mix based on throughput. Operators need to only set it and forget it.

Smarter decisions —
to maximize sales
and minimize costs

Optimizes Payment

Running in exact-change mode is a top concern for operators. Unlike other industry coin mechs, if necessary, the CF7000 is intuitive enough to override payout commands from the vending machine. And, it will rebalance tube levels by modifying coin payouts to maximize the number of vends for the change fund available. It's even smart enough to recommend a better tube configuration within your par settings, if these payout situations frequently occur. Tubes are also in-field configurable to change on demand. Combine with a MEI VNR® Recycler, and you'll keep the cash flowing.

Auditing Data and Diagnostics

The LED display and Smart Menu provide a window into your business, at the

machine. Historical data - including bills stacked - coins to cashbox, current tube status, and critical business statistics are all available to review on demand or easily downloadable. Self-diagnostics are built in to walk you step by step through issues that occur. Troubleshooting tips pop up on the display, to enable problem solving right in the field, saving expensive service calls and time.

Easy to Use

The intuitive design of the CF7000's Smart Menu simplifies training and is available in 11 languages. Software downloads are easily done through the CPM (changer programming module).

The CF7000's user-friendly design allows for easy access to the coin path to remove debris without tools or service calls. It's even water-resistant. Coin tubes are easily filled with its free-standing cassette. Accept free vend and value tokens, as you like. The CASHFLOW Series 7000 is known for its superior jam resistance and quality - just ask our 1.5 million customer installs!
